

Enabling communication at Sea, everywhere

A maritime satcom solution from Iridium

Iridium OpenPort was launched 2008 as a maritime product for voice and data. It provides a true global coverage, including the Polar Regions.

Compact equipment at competitive price

The onboard equipment includes a light-weight, omni-directional antenna with no moving parts. It can be placed in any convenient location on deck and does not need a stabilized platform. The compact below-deck unit can easily be mounted on a bulkhead.

Simultaneous voice and data

Iridium OpenPort gives you three voice lines and an "always-on" IP-based data connection. It is possible to use all voice lines simultaneously and at the same time transmit data. The data throughput options are: up to 9,6 kbit/s or up to 32, 64, 128 depending on the subscription package chosen. Charges for data are volume based, i.e. per Megabyte transferred.

Flexible price plans and subscription packages

Iridium OpenPort gives you the opportunity to choose a price plan/package corresponding to your specific needs and traffic volumes. "Pay as you go" is a plan with a low monthly fee and data throughput of up to 9,6 kbit/s.

Antenna

- Height 230 mm
- Diameter 570 mm
- Weight 11 kg

Below Deck Unit

- Height 200 mm
- Width 250 mm
- Depth 55 mm
- Weight 1,35 kg

Voice

3 independent RJ11 ports for simultaneous use

Data

IP-based, 9,6 - 128 kbit/s.
Pricing per Megabyte (MB)

Coverage

Truly global, including Polar Regions

Flexibility

Chose the price plan and package corresponding to your volumes and demands.
